PROFESSIONAL SUMMARY

I'm a final-year Software Engineering student at SLIIT, graduating in September 2026. During my internship at Sri Lanka's Postal Department ICT Division, I built a cross-platform mobile application that supported real government operational workflows my first taste of delivering software in a real-world environment. I enjoy working across the full stack, from React and Node.js frontends to Spring Boot backends, and I'm comfortable with REST APIs, Docker, CI/CD pipelines, and microservice design. I've also worked on mobile apps using React Native and SwiftUI, and an AI computer vision system using Python, FastAPI, and YOLOv8 that got accepted for publication at ICHORA 2026. I'm looking to join a collaborative engineering team where I can keep growing and build software that genuinely makes a difference.

TECHNICAL SKILLS

Strong: React.js, Node.js, Express.js, Spring Boot, REST APIs, JWT Authentication, Tailwind CSS

Comfortable: React Native, PostgreSQL, MongoDB, Docker, GitHub Actions, CI/CD, Render

Familiar: Kubernetes, SwiftUI, FastAPI, YOLOv8, AngularJS

Languages: JavaScript, Java, Python, Kotlin, Swift

Tools: Git, GitHub, Swagger, Postman, SonarCloud, Android Studio, Xcode

EXPERIENCE

InternSoftwareEngineer [ICT Division, Postal Headquarters · Sri Lanka](#)

Feb 2025 – Jul 2025

- Developed a cross-platform mobile application (EC Post) using React Native and Expo for Sri Lanka's Postal Department ICT Division, supporting mail tracking, service request handling, and acceptance management workflows
- Integrated 10+ authenticated REST API endpoints between the mobile frontend and government backend systems, handling real-time data sync, status updates, and secure session management
- Digitised 3 core operational workflows - mail tracking, service requests, and acceptance management — reducing reliance on manual paper-based processes for field staff
- Collaborated with ICT Division stakeholders across the full delivery lifecycle: requirements gathering, development, QA testing, and deployment

PROJECTS

Cloud-Based E-Commerce Microservices Platform

[React](#) · [Node.js](#) · [PostgreSQL](#) · [Docker](#) · [GitHubActions](#) · [SonarCloud](#) | github.com/SithuminiNimthara/ecommerce-microservices-platform

- Architected a cloud-native e-commerce platform across 4 independently deployable microservices (User, Product, Order, Payment), each with isolated PostgreSQL databases and dedicated REST APIs, enabling zero-downtime individual service updates
- Secured platform end-to-end with JWT authentication and role-based access control; automated full build-test-deploy cycle via GitHub
- Actions CI/CD deployed on Render
- Integrated SonarCloud DevSecOps scanning on every commit, enforcing automated code quality gates and security vulnerability detection across all 4 services before merge

AI-Based Shoreline Monitoring for Sea Turtle Conservation - Accepted · ICHORA 2026

[Python](#) · [YOLOv8](#) · [FastAPI](#) · [React](#) | github.com/SithuminiNimthara/Franklin

- Developed a YOLOv8 image segmentation pipeline to detect and classify coastal boundary changes threatening sea turtle nesting sites along Sri Lankan coastlines accepted for publication at ICHORA 2026
- Engineered a spatial distance analysis engine calculating real-time proximity between detected shoreline boundaries and GPS-tagged
- nest locations, generating tiered risk alerts (low / medium / high) via FastAPI
- Built a React dashboard visualising segmentation overlays, nest risk classifications, and shoreline change trends for conservation team decision-making

NurseryConnect Parent Dashboard (iPadOS)

[SwiftUI](#) · [SwiftData](#) · [SwiftCharts](#) · [MVVM](#) | github.com/SithuminiNimthara/NurseryConnect-Parent-App

- Built a native iPadOS childcare management app in SwiftUI using MVVM architecture, delivering 5 core modules daily diary, medication reminders, emergency contacts, child profiles, and attendance tracking in a unified tablet interface
- Implemented full offline-first persistence using SwiftData and designed a responsive NavigationSplitView sidebar with Swift Charts analytics dashboards optimised for iPad UX

EDUCATION

BSc(Hons) in Information Technology - Software Engineering

Sri Lanka Institute of Information Technology (SLIIT)

Expected: Sep 2026
